

BLETCHLEY PARK

Livingstone Group becomes a Corporate Partner of Bletchley Park

The company will help to support STEM learning and the preservation of Codebreaking history

Livingstone Group is delighted to announce that it has become a new Corporate Partner of [Bletchley Park](#), the world-renowned site of World War Two codebreaking and a birthplace of the modern-day computer. The Group's vital support will assist in the creation of a world-class destination for Science, Technology, Engineering and Mathematics (STEM) learning and research, and will enable visitors to continue learning about technology pioneers and their contemporary legacy.

Home of British codebreaking and the root of modern information technology, Bletchley Park played a major role during World War Two, most famously decoding the Nazi's Enigma machine. The intelligence it produced had a profound impact on the outcome of the conflict and for the past two decades the site has become an internationally-celebrated heritage attraction, educating visitors about Bletchley Park's history and acknowledging the work of its Codebreakers.

"We are thrilled to be supporting a place of such historical significance," said Perry Fawcett, CEO at Livingstone Group. "The advancements in modern IT that were made at Bletchley Park continue to have a massive impact on today's digital-first world, an influence that will endure well into the future. As a birthplace of modern-day computing and software technology, Bletchley Park is a fitting partner for us at Livingstone Group and we are delighted to be helping with the site's continued development."

Livingstone Group joins a variety of other partners – including GCHQ, Microsoft, BT and Goldman Sachs – in supporting Bletchley Park, allowing it to continue championing innovation and linking its story to the challenges faced in today's technologically complex society. Earlier in 2020, Bletchley Park Trust announced plans to develop new exhibition spaces, a Collection Centre and a Learning Facility in order to preserve and enhance Bletchley Park as a world-class visitor attraction and educational centre. Livingstone Group's support will help enable these developments.

"As a respected company that focuses on Software and Cloud Computing Portfolio Management, Livingstone Group is a natural partner for Bletchley Park," said John Palser, Head of Corporate Development at Bletchley Park. "Its support will help to increase access to the centre of our historic site, securing our collection and inspiring our 21st Century audience in the place where history was made. Livingstone Group will play a key role in securing the legacy of Bletchley Park's codebreaking and technology pioneers. Together, we can use the innovations of the past to highlight the importance of technology and communications now and for the future."

About Livingstone Group

Livingstone Group is the leading independent, global provider of software & cloud portfolio management and optimization services. With a growing team of 150 experts, Livingstone Group helps clients optimize their software & cloud portfolios to avoid unnecessary cost and risk, providing the intelligence needed to govern digital transformation journeys. With a strong track record of delivering proven, up-front savings that average 38% through its Optimization services, Livingstone Group drives the best value throughout an investment's lifecycle. Its Trustworthy Data and Lifecycle services help clients maintain these savings through control and mitigation of business risks, ensuring clients continue to get value from their IT investments.

Livingstone Group's diverse global client base includes Fortune 500, public sector, and mid-market organizations located in over 20 countries. The company also manages client service contracts spanning over 138 countries. Livingstone Group is headquartered in Reading, UK, with further offices located across the UK and throughout North America.

About Bletchley Park

Bletchley Park is a vibrant heritage attraction and museum, open daily to visitors.

It was the home of British World War Two codebreaking; a place where technological innovation and human endeavour came together to made groundbreaking achievements that have helped shape the world we live in today.

This unique site was previously a vast Victorian estate, where parts including the Mansion still survive, expanding during wartime to accommodate Codebreakers Huts and Blocks. During World War Two, the Government Code and Cypher School (GC&CS), now known as the Government Communications Headquarters (GCHQ), was based at Bletchley Park.

It grew from a small team of specialists to a vast intelligence factory of thousands of dedicated women and men. This extraordinary combination of brilliant and determined people and cutting-edge technology contributed significantly to Allied victory. In tough conditions, they provided vital intelligence and developed pioneering technological innovation that had a direct and profound influence on the outcome of the war.

The site continues to reveal secrets and tell fascinating stories of our national legacy.
